

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning on page 28, line 24 and ending on page 29, line 2 with the following amended paragraph:

By a third variation, it is provided to use a kind of signal processing through which the hearable artifacts generated by the data recording are suppressed. The noise generated by a burst can be determined individually for each hearing device already in the developing phase and can be eliminated with the aid of a suitable signal processing program. For example, noise signals generated by the logging process can be eliminated with the aid of a filter. As another example, the logging of data can be carried out in data packets, such that a repeat rate for the recording of data packets does not exceed a predefined repeat rate.
